

## About CPP

Custommedia's Collaborative Portal Platform (CPP) is a rich platform which enables organisations to have **effective and secure environment** for multi-tracks communications and collaborations among internal and external individuals or groups, over private or open networks such as the Internet.

It comes with a set of features commonly needed by organisations seeking this nature of solutions. It can be used right 'out of the box'; or users can opt for **customisation to cater for their specific needs**. The CPP environment can be segregated into **open and secure areas**; and users (internal and external) can be grouped into various categories with varying sets of access rights.

With CPP, organisations can have a **single 'communications nerve centre'** for internal and external communications needs, enabling **centralised management of monitoring, access control** as well as **information update and dissemination**.

In addition, CPP is based on Microsoft's **SharePoint platform** which has been built on proven technologies. Users are rest assured of availability of **professional support** and **continuous enhancement** of the platform.

Please look inside for more details CPP.

# Collaborative Portal Platform (CPP)

CPP 2013 Version 1.0.1

Giving organisations  
an **UNFAIR**  
**ADVANTAGE** over  
competitors

Software Engineering Innovations  
for Internet-of-Things

## About Custommedia

Custommedia Sdn Bhd ("Custommedia") is an IT-based organisation with core competency in the Software Engineering discipline.

Established in 1991, the company is ISO 9001-certified and was among the first to obtain the MSC Malaysia-status endorsement.

Over the years, the company has accumulated a breadth of expertise and experience in developing and delivering industry-leading Software Engineering solutions using multiple tools, system platforms and methodologies.

This is further enriched by continuous research and development (R&D) initiatives to innovate new solutions, leveraging on leading and emerging technologies.

Custommedia breadth of offering covers the areas of **Software Engineering** solutioning, **Professional Services** and **Consultancy**, **Software Testing** and **Professional Training**.

It also has a range of technology-centric products which include **IoT-middleware** which enables implementation of Internet of Things (IoT) solutions; **Nutrie-Mart** dietary planning/monitoring tool; and **FRAME-Work ONE** which is a software engineering methodology for a disciplined approach to software development projects.

## CPP Editions

Custommedia's CPP is available in three Editions, namely CPP Lite, CPP Standard and CPP Enterprise, as depicted in Figure 1.

- **CPP Lite**  
The base package which includes information dissemination and maintenance as well as selected collaboration functionalities.
- **CPP Standard**  
More functionality can be added through Extended Packages (CPP Add-Ons) or upgrade to higher configuration packages.
- **CPP Enterprise**  
Includes corporate administrative applications such as Document Management, Facility Management, Timesheet, Claims and Project Dashboard.

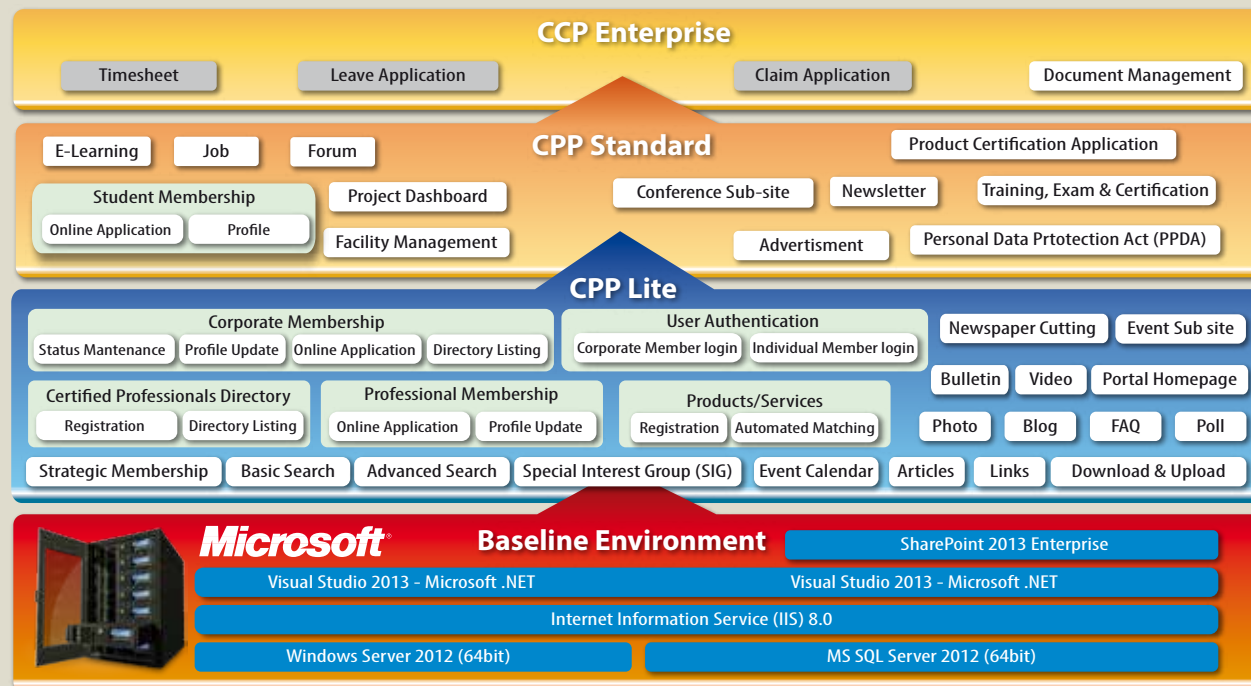

## CPP Evolution

Development of CPP started in 2009 on the (then) newly-released Microsoft Sharepoint 2010 platform and the first deployment for a customer took place in 2010. Since then, CPP has been successfully migrated to Sharepoint 2013 and in line with Custommedia's policy to keep its products current, work on migrating CPP to Sharepoint 2016 is in progress.

In terms of features, CPP enhancements will include interoperability with external systems, devices and services; enabled by Custommedia's home-grown Internet-of-Things (IoT) technologies.

CPP is also currently undergoing evaluation process towards obtaining ISO-based quality certification though the QS scheme which is owned and operated by the Malaysian Software Testing Board.

Figure 1: Collaborative Portal Platform (CPP) Editions

CPP has been designed and developed based on experience drawn over more than 20 years from our engagements in product and system solution development, research and development, knowledge management and business process consultancy. CPP can be deployed in a traditional server set-up or on Cloud environment, depending on customers' needs and preferences. Licensing fee for CPP is based on the final configuration of the installation.
